

DTE Retro-Commissioning Program Express Track

Is your building out of sync? The costs can add up.

Changing occupant needs, re-purposed space, renovations, and aging systems can put your building out of sync. The DTE Energy Retro-Commissioning (RCx) Program is designed to help you overcome these challenges by lowering energy usage and operating costs, reducing maintenance, and improving occupant comfort and productivity. Retro-commissioning is focused on tuning-up your existing equipment for more efficient performance rather than upgrading or replacing your equipment and requiring a large capital investment.

DTE Energy is here to help.

DTE funds this complimentary Retro-Commissioning Program to help commercial and industrial customers lower their energy usage. The RCx Standard Track entails a deep look into your controls and process systems to identify measures to improve equipment performance. The RCx Express Track is designed to find and fix low-cost operational and process energy efficiency opportunities.

Building system optimization:

- Optimize scheduling to ensure equipment and lighting is operating only when needed
- Fix ventilation dampers that are not operating properly
- Adjust supply air temperature and fan speed
- Adjust ventilation in over-ventilated areas
- Adjust supply air pressure setpoint
- Align zone temperature setpoints to match building occupancy patterns

Process optimization:

- Improve compressed air operations
- Optimize steam systems
- Optimize process cooling and heating
- Enhance industrial refrigeration performance

Who is eligible for the Express Track?

The RCx Express Track is for commercial and industrial DTE customers who are looking to reduce their energy usage, operational costs, and improve building performance. Selection criteria include:

- Have a controls system with the capability to schedule units on/off, make adjustments, and if possible, adjust operational parameters from an operator interface
- Annual energy usage over 1,000,000 kWh (approximately 75,000 sq ft or greater)

DTE Retro-Commissioning Program Express Track

DTE

Express Track Program Process

1

Find

Your controls system will be assessed to identify specific energy-saving measures.

2

Fix

Any approved measures are implemented on the spot.

3

Verify

Documentation will be collected to verify energy savings.

Receive DTE paid incentives for participating in this money saving program.

This complimentary program is funded by DTE's Energy Efficiency Program for Business. The Express Track does not require a minimum customer spend, so it is possible to have your project fully-funded by DTE.* You can also receive a bonus for exceeding minimum savings targets.

Program benefits

- Energy savings
- Reduced maintenance and operating costs
- More comfortable indoor environment
- Improve occupant productivity
- Align operations with owner's facility requirements

Get started today!

To apply or to get more information on the program, visit rcx.dteenergy.com, send an email to DTERCx@esciences.us, or call **248.430.5579**. We can check your eligibility, answer questions, help you find an approved controls contractor, and help make DTE's Energy Efficiency Program for Business work for you.

*Up to \$2,000
